ROAD SAFETY AUDIT REVIEW

TO: **Melinda Scott, Energy and Community Development Planner, Williston**
FROM: **Sai Kumar Sarepalli, P.E.; CCRPC**
DATE: **03/31/2025**
RE: **Oak Hill Road between US Route 2 and Butternut Road**

The Town of Williston requested the Chittenden County Regional Planning Commission (CCRPC) staff to conduct a Road Safety Audit (RSA) along Oak Hill Road from the Williston Road/US Route 2 intersection to the Butternut Road intersection. The Road Safety Audit analyzed the 85th percentile speed, crash history and provided short-term and long-term safety improvement recommendations for the study area.

Study Area and Existing Conditions

Oak Hill Road is a paved road classified by the state as Class II Town Highway and functionally classified as a Major Collector. Speed and volume data were collected at two locations along the study corridor at locations shown in Figure 1.

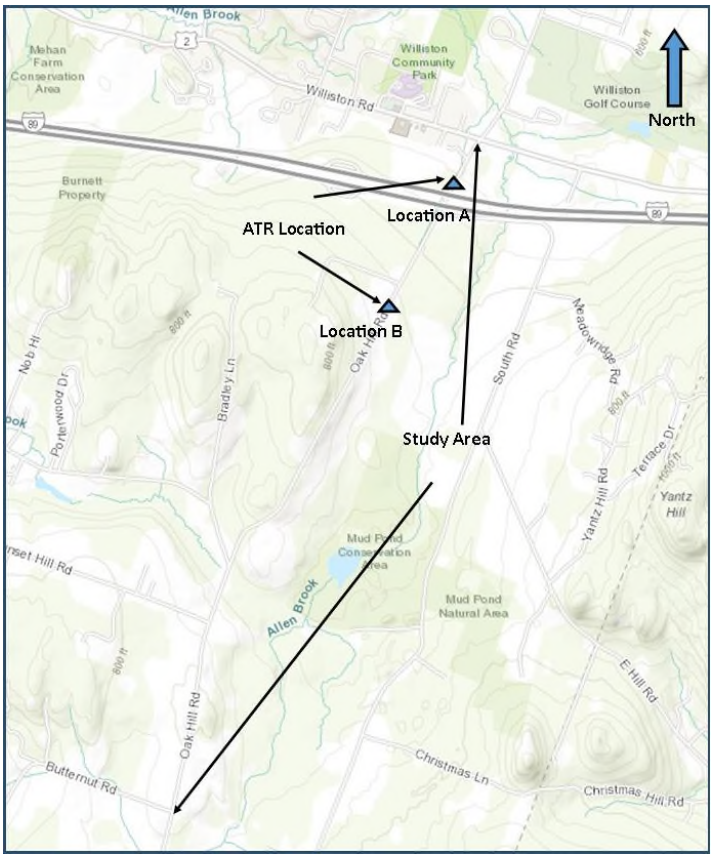

Figure 1: Study Area

Purpose of RSA

The RSA was performed at the request of the Town of Williston. Oak Hill Road is a major commuter route serving traffic from Hinesburg and other destinations in the south rural residential areas. The 2016 Williston Comprehensive Plan identified need for safety improvements on Oak Hill Road.

A project team meeting was held on October 8th, 2024 to discuss the scope of the study and safety concerns along the corridor. The following team members participated in the discussion:

Sai Sarepalli, PE, Project Manager, CCRPC
Jason Charest, PE, PTP, CCRPC
Melinda Scott, Town of Williston
Bruce Hoar, Town of Williston
Meghan Cope, Planning Commission Member
Matthew Boulanger, Town Manager
Christine Dougherty, Town of Williston
Patrick Foley, Police Chief, Williston
Kevin Thorley, Chair, Energy Committee

The project team discussed the issues along Oak Hill Road including the following:

- Motorists driving above the posted speed limit.
- Unsafe conditions for motorists at the intersection of Old Creamery Road and Oak Hill Road due to the intersection alignment.
- Excessive traveling speed along Oak Hill Road is particularly dangerous for bicyclists, especially between Williston Road and South Road.
- Unsafe intersection crossing situation for southbound bicyclists turning left on to South Road.
- Unsafe travel conditions for bicyclists along narrow shoulders of Oak Hill Road, especially between the intersection of Williston Road and South Road.
- The Public Works Department installs a minimum of 11 ft travel lanes on town highways.

Field Observation

A CCRPC staff member conducted a windshield survey of the study corridor on November 14th, 2024. The following observations were made during the survey:

- The roadway width of Oak Hill Road varies between 23 ft and 24 ft with narrow paved shoulders.
- The posted speed limit is 35 mph between Williston Road and South Road, 40 mph between South Road and approximately 2540 Oak Hill Road, and 45 mph for the rest of the study area to the south.
- The vegetation along Oak Hill Road obstructs view of oncoming traffic for motorists stopping at the Old Creamery Road approach, especially for left turn motorists from Old Creamery Road.
- The beginning of the 35-mph speed zone in the northbound direction near the South Road intersection does not align with the ending of the same speed zone in the southbound

direction. A speed sign should be installed at the beginning of the specified speed zone and align with the ending of the same speed zone in the other direction.

- Not enough pavement width available for bicyclists traveling southbound near the I-89 bridge to make a turn left on to South Road.

Figure 2: Looking south at the intersection of South Road

Figure 3: Looking north at the intersection of Old Creamery Road

Speed and Volume Data

Traffic volume and speed data (attached at the end of this report) were collected using an Automatic Traffic Recorder (ATR) at the two locations shown in Figure 1. Data were collected between 06/01/2023 and 06/07/2023 at the location north of the I-89 bridge (Location A), and between 05/05/2023 and 05/11/2023 at the location south of Patridge Hill (Location B).

Table 1: Speed and Volume Data

	Location A		Location B	
	Northbound	Southbound	Northbound	Southbound
Average Speed (mph)	40	38	48	49
10 mph Pace Speed	35-44	35-44	46-55	46-55
Percent in Pace	75%	71%	67%	63%
85th Percentile Speed (mph)	45	43	52	53
Average Daily Traffic (Veh/Day)	5,217		3,083	

At Location A, the 85th percentile speed was observed as 45 mph in the northbound direction and 43 mph in the southbound direction. At this location, more than 70% of traffic is traveling between 35 mph and 44 mph in both directions indicating that most of the motorists are exceeding the posted speed limit. The posted speed limit at this location is 35 mph.

At Location B, the 85th percentile speed was observed as 52 mph in the northbound direction and 53 mph in the southbound direction. At this location, 67% of the northbound traffic travels between 46 mph and 55 mph and 63% of the southbound traffic travels within the same range. The posted speed limit at this location is 40 mph.

The average daily traffic at Location A was observed to be higher than at Location B.

Crash History

The crash data were reviewed for the period ranging from 2019 through 2024. CCRPC obtained crash reports from the Williston Police Department and the Vermont Agency of Transportation (VTrans).

There were fourteen crashes reported in the last 5 years along Oak Hill Road, and 5 crashes at the intersection of Oak Hill Road and Williston Rd/US Route 2. The crash data shows that 3 crashes happened during snow and icy conditions and operators were driving too fast for given conditions. The rest of the reported crashes along Oak Hill Road were due to drivers' inattention and failure to keep in proper lane. The majority of the reported crashes were single vehicle crashes.

In the last 5 years, there have been no crashes reported involving either pedestrians or bicyclists. A summary table of the reported crashes is provided at the end of this report.

Bike and Pedestrian Data

No pedestrian and bicyclist traffic data were collected for the study area. However, a review of Strava Metro data, which is a crowd sourcing application where users log data for walking, running or biking, indicated non-motorized traffic on Oak Hill Road between Williston Road/US Route 2 and South Road. The Town staff also mentioned that most bike users travel along Oak Hill Road from the Village area and make a left turn on to South Road for biking. According to the Strava Metro Data, the average daily non-motorized trips logged in July of 2023 are 13 trips on Oak Hill Road between Williston Road and South Road, and an average of 7 trips were logged south of the South Road intersection. Note that the

Strava data are limited and not necessarily representative of the population.

Figure 4: Bike Activity on Strava Metro along Oak Hill Road

Based on the field survey, speed and crash data analysis, the following safety concerns were identified along the study corridor.

1. Motorists are traveling at speeds higher than the posted speed limit at times.
2. High traffic speeds and lack of adequate shoulders could be hazardous for pedestrians and bicyclists.
3. Limited sight distance at the intersections of Old Creamery Road, Partridge Hill Road, and Butternut Road could pose hazardous conditions for motorists.

The following are the low cost and short-term safety improvements that may improve the safety of motorists and cyclists in both travel directions along the study corridor.

1. Remove, clear or trim vegetation at the Old Creamery Road, Partridge Hill Road and Butternut Road to improve sight distance in both travel directions.

2. Remove the 35-mph sign supplemented with the END plaque in the southbound direction near the South Road intersection.

Figure 5: Remove the 35 mph sign with the supplemental END plaque

3. Relocate the existing northbound 35-mph sign located to the north of the South Road intersection to the south aligned with the southbound 40 mph sign location.

Figure 6: Relocate existing 35 mph sign

4. Install "Bicycle Allowed Use of Full Lane" (R9-20) sign at appropriate locations between the Williston Road and South Road segment in both directions.

5. Install "Bicycle Passing Clearance Sign" (R4-19) with 4 ft minimum clearance at appropriate locations in the predominant bike traffic segment between Williston Road and South Road in both directions.

R4-19

6. Install “Bicycle Warning Sign” W11-1 at the South Road intersection in both northbound and southbound directions to alert the road user of unexpected bicyclist crossing activity that might cause conflict.

W11-1*

7. Install an Intersection Ahead warning sign (W2-2) supplemented with the street name “Old Creamery Road” plaque, as shown below, on both the northbound and southbound approaches approximately 350 ft from the intersection. The bottom of the street name plaque should be at least 5 ft from the road surface.

8. Collaborate with the law enforcement agency and conduct recurring safety and speed limit enforcement public outreach activities including safety campaigns at various public events and at educational institutions such as High Schools.
9. Install portable speed radar feedback signs at appropriate locations that could be moved at two or three locations within the study corridor.
10. Install pavement marking legend “SLOW” in the travel lane in both directions between the intersections of Williston Road and South Road to alert drivers to slow down.

The following are the medium and long-term safety improvements that may improve the safety of motorists and cyclists within the corridor.

1. Evaluate and consider installation of wider shoulders. Wider shoulders would provide additional space for bicyclists and minimum passing clearance for motorists without significantly encroaching the opposite travel lane. The wider shoulders would provide a recovery area for motorists who lost control and reduce the likelihood of single vehicle crashes.

2. Evaluate and consider the appropriateness of long-term traffic calming measures for the 35-mph speed limit zone segment of Oak Hill Road. The typical traffic calming measures that can be considered includes vertical deflections such as speed tables, speed humps and raised intersections, and horizontal travel lane shifts such as median island, road narrowing, chicanes.
3. Upon implementation of the recommended short-term safety improvements and completion of speed limit enforcement campaign, monitor the traffic conditions and driver's behavior within the corridor. If the results are not satisfactory, then conduct a comprehensive corridor study to further evaluate the safety of all road users.
