TECHNICAL MEMORANDUM

TO: **Linda Blasch, Assistant Town Administrator, Jericho**
FROM: **Sai Kumar Sarepalli, P.E.; CCRPC**
DATE: **07/28/2025**
RE: **Skunk Hollow Road Speed Study and Traffic Calming Analysis**

The Town of Jericho requested the Chittenden County Regional Planning Commission (CCRPC) staff to investigate current traffic conditions, including volume and speed data, and provide recommendations for additional speed calming measures along Skunk Hollow Road between VT Route 117 and Plains Road in Jericho.

1. Existing Conditions

Skunk Hollow Road is a paved road classified by the state as a Class II Town Highway and functionally classified as a Major Collector. The study area extends from VT Route 117 to the intersection of Plains Road. The posted speed limit on this segment within the study area is 35 mph. Figure 1 shows the study area.

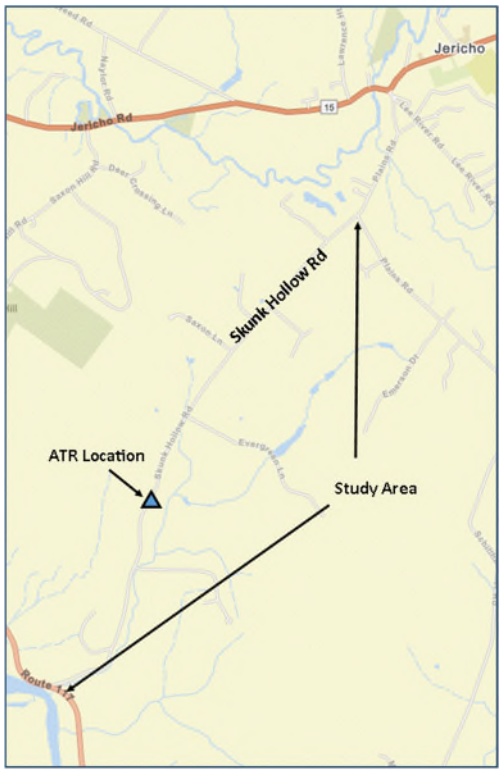

Figure 1: Study Area and ATR Location

Field Observations

The CCRPC staff conducted a field reconnaissance survey on May 14, 2025 to observe the traffic operations, land use and roadway characteristics, and pedestrian and bicycle activities in the study area. The following are some of the observations along the study area:

- Primarily residential and agricultural land use along the study area.
- Pavement width varies between 20 ft and 22 ft with narrow asphalt shoulders.
- No sidewalks are located in the study area.
- Radar speed feedback signs are located within the study area.
- Centerline median islands are located at a couple of locations within the study area.
- Speed tables are located within the study area.

Figure 2: Median Island on Skunk Hollow Road

Traffic Volume and Speed Data Analysis

The CCRPC staff installed an Automatic Traffic Recorder (ATR) on Skunk Hollow Road to collect traffic volume and speed data. The data were collected from 09/19/2024 through 09/25/2024. Pedestrian and bicyclist data were not collected. The following table shows directional average, 85th percentile speed, 10 mph pace speed and Average Daily Traffic (ADT).

Table 1: Volume and Speed Data

	SB	NB	Combined
Average Speed in MPH	39	40	39
85th Percentile Speed in MPH	42	43	42
10 MPH Pace Speed	36-45	36-45	36-45
Percent in 10 MPH pace	79%	79%	79%
Average Daily Traffic (ADT) veh/day	2,989		

It is evident from the data that about 80 percent of motorists are traveling at higher speeds between 36 and 45 mph on Skunk Hollow Road exceeding the posted speed limit in both directions. The 85th percentile speed in both travel directions is at least 5 mph more than the posted speed limit. The 85th percentile speed is defined as the speed at which 85 percent of motorists are traveling at or below.

The Town should consider additional traffic calming measures to achieve reduction in operating speeds on Skunk Hollow Road.

2. Traffic Calming

The Federal Highway Administration (FHWA) describes traffic calming as *"supporting the livability and vitality of residential and commercial areas through improvements in non-motorist safety, mobility, and comfort. These objectives are typically achieved by reducing vehicle speeds or volumes on a single street or a street network. Traffic calming measures consist of* ***horizontal, vertical, lane narrowing, roadside, and other features that use self-enforcing physical or psycho-perception means*** *to produce desired effects.[1]"*

The primary traffic calming objectives are:

1. Achieving slower vehicle speeds
2. Increasing the safety and perception of safety for non-motorized users
3. Increasing the quality of life in residential and commercial areas
4. Reducing the necessity of police enforcement
5. Increasing access for all modes of transportation

Traffic Calming Measures

The applicability of traffic calming measures depends on roadway characteristics, land use and desired effects such as lowering speed, reducing volumes or increasing safety. Traffic calming measures can be categorized primarily into four types:

1. Horizontal Deflection
2. Vertical Deflection
3. Road or Lane Narrowing
4. Routing Restriction

The following table shows a list of typical traffic calming measures.

Table 2: Typical Traffic Calming Measures

Horizontal Deflection	Vertical Deflection	Road/Lane Narrowing	Routing Restriction
Lateral Shift	Speed Hump	Curb/Corner Extension	Diagonal Diverter
Chicane	Speed Cushion	Choker	Full Road Closure
Realigned Intersection	Speed Table	Median Island	Half Road Closure
Traffic Circle	Offset Speed Table	On-street Parking	Median Barrier
Small and Mini Roundabout	Raised Crosswalk	Road Diet	Forced Turn Island
	Raised Intersection		

Skunk Hollow Road is a two-lane major commuter route with narrow shoulders that mostly serves traffic between Jericho Village and Interstate 89 through Route 117. Given the roadway characteristics of Skunk Hollow Road with steep grade and the vicinity land use, road/lane narrowing, median islands and vertical deflection are acceptable traffic calming measures for the study area that may impact vehicle speeds. Routing restriction measures are not applicable for the study area.

[1] https://safety.fhwa.dot.gov/speedmgt/ePrimer_modules/module2.cfm

The Town installed median islands and speed tables to address excessive speeds on Skunk Hollow Road at locations shown in the attached implementation plan.

3. Considerations and Recommendations

Speed management and speed control are a significant challenge for local municipalities, especially through small rural communities. The land-use characteristics within the study area consist of residential and agricultural use in a rural environment. Law enforcement alone may accomplish speed management for a temporary period at significantly higher costs and cannot address the safety and speeding issue permanently. Traffic calming measures, as discussed earlier, should be implemented strategically along Skunk Hollow Road to address speeding and road users' safety within the study area. According to the FHWA, agencies often set speed limits concurrently with implementing speed management strategies such as traffic calming measures and increased enforcement to achieve desired operating speeds[1].

This memo provides feasible and acceptable traffic calming measures for the Town's discretion and assists in making an informed decision for implementation. The Town can pick and choose from the traffic calming measures listed depending on available budget and public feedback. The following are some considerations and recommendations for implementing traffic calming measures along Skunk Hollow Road between Plains Road and VT Route 117.

1. Install additional median islands on Skunk Hollow Road at locations shown in the attached implementation plan.
2. Install Speed Reduction pavement markings on Skunk Hollow Road at locations shown in the attached implementation plan. Speed reduction markings are transverse pavement markings with progressively reduced spacing installed within a lane in a specific pattern to give drivers the impression that their speed is increasing[2]. See Figure 3 for details.
3. Install additional speed tables supplemented with a warning sign and 20 mph advisory speed sign at locations shown in the attached implementation plan.
4. As a low-cost measure, the Town can consider installing the Vermont Standard "Unsafe to Pass" (VW-092) sign

at appropriate locations in both travel directions within the study area to discourage unsafe passing.
5. A traffic calming implementation plan is attached with this memo. The traffic calming measures and signs are shown at approximate locations. Actual locations should be surveyed in the field prior to installation.
